Project Design Phase-II
Data Flow Diagram & User Stories

Date	14 October 2026
Team ID	
Project Name	Metro Ticket Generating System
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Data Flow Diagram (Level 1) – Metro Ticket Generating System:

The passenger enters journey details on the portal form (1.0). The fare client script (2.0) returns the amount. On Order Now, the QR script (3.0) sends ticket data to the QR Code API and shows the QR image. The confirmed order is submitted as a request (4.0) and stored in the request tables (D2). Flow Designer (5.0) reads the catalog variables, saves the booking in the Metro Ticket Booking table (D3) and creates a catalog task (D4), which the Station Manager uses to verify the ticket (6.0).

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Passenger (Web / Mobile user)	Ticket Booking	USN-1	As a passenger, I can open the Service Portal and find the 'Book A Metro Ticket' item.	Item is visible under Services and opens the booking form	High	Sprint-1
		USN-2	As a passenger, I can select Starting From and Going To stations from a list.	Station names are shown from the Metro Station's Details table	High	Sprint-1
		USN-3	As a passenger, I can choose Single or Return journey and 1–4 passengers.	Choices appear and are mandatory	High	Sprint-1
	Fare Calculation	USN-4	As a passenger, I can see the fare calculated automatically.	Ameerpet → LB Nagar, Single, 2 passengers shows 100	High	Sprint-2
	Payment	USN-5	As a passenger, I can select UPI, Card or Others and enter the mode when Others is chosen.	'Enter payment mode' appears only for Others and is mandatory	Medium	Sprint-2
	QR Ticket	USN-6	As a passenger, I can see a QR code ticket before confirming my order.	QR popup appears on the first Order Now	High	Sprint-2
	Request Tracking	USN-7	As a passenger, I get a request number and can track my booking in My Requests.	REQ number shown after the second Order Now	High	Sprint-2
Station Manager	Ticket Verification	USN-8	As a station manager, I receive a task to verify each new ticket.	Catalog task assigned to Station Managers group	Medium	Sprint-3
Metro Operations Team	Booking Data	USN-9	As the operations team, I can see every booking stored in one table.	New MTB record created with all form values	High	Sprint-3
IT Administrator	Security	USN-10	As an administrator, I can ensure normal users cannot open the database tables.	Default ACLs block access to table lists	High	Sprint-4
	Testing	USN-11	As an administrator, I can test the full booking on the portal before release.	All UAT test cases pass	Medium	Sprint-4
	Station Data	USN-12	As an administrator, I can add or update stations in the station table.	New station appears in the form list	Low	Sprint-1
