Ideation Phase
Define the Problem Statements

Date	14 October 2026
Team ID	
Project Name	Metro Ticket Generating System
Maximum Marks	2 Marks

Customer Problem Statement Template:

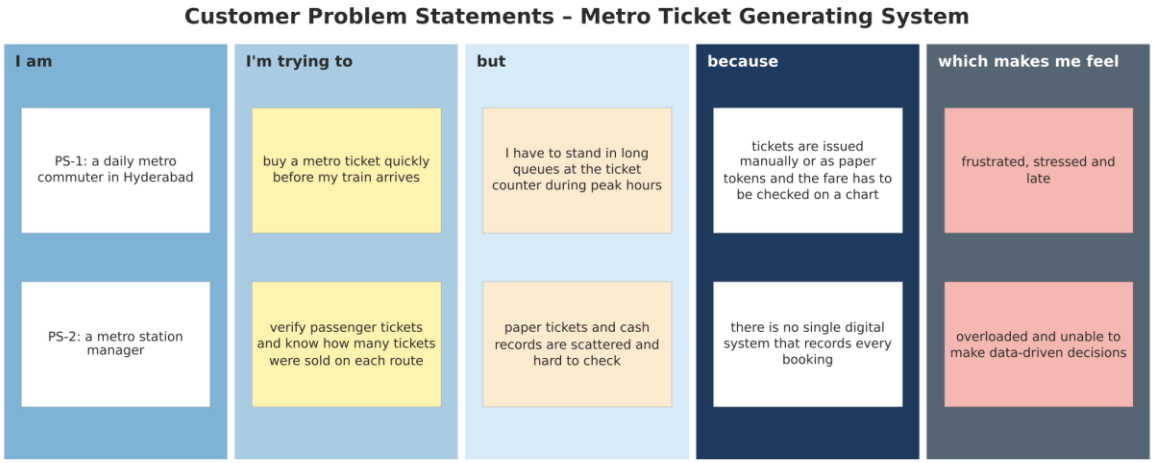

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Problem Statement – Metro Ticket Generating System:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A daily metro commuter (student / office goer) in Hyderabad	Buy a metro ticket quickly before my train arrives	I have to stand in long queues at the ticket counter during peak hours and need exact change	Tickets are issued manually or as paper tokens and the fare has to be checked on a printed chart	Frustrated, stressed and often late
PS-2	A metro station manager / operations team member	Verify passenger tickets and know how many tickets were sold on each route	Paper tickets and cash records are scattered and hard to check	There is no single digital system that records every booking	Overloaded and unable to make data-driven decisions

Summary: Both problems point to the same need – a digital, self-service metro ticket booking system that calculates the fare automatically, issues a QR ticket instantly and stores every booking for station staff. This project builds that system on ServiceNow using a Service Catalog item, client scripts, a portal widget and Flow Designer.
