Project Development Phase
Performance Test

Date	14 October 2026
Team ID	
Project Name	Metro Ticket Generating System
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Booking data from the ServiceNow table Metro Ticket Booking (u_metro_ticket_booking) – one record (MTB number) per booking.
2.	Data Preprocessing	Validated at entry: mandatory fields, read-only fare, fixed choice values; Flow Designer maps catalog variables to table fields.
3.	Utilization of Filters	ServiceNow list filters / condition builder (e.g. Type of Journey = Return, Mode of Payment = Card).
4.	Calculation fields Used	Fare = route fare × No of Passengers (× 2 for Return Journey) – calculated in the catalog client script, not in Tableau.
5.	Dashboard design	No of Visualizations / Graphs - 0 (Tableau not used in Phase 1). Planned: route-wise bookings, payment-mode share, peak hours.
6	Story Design	No of Visualizations / Graphs - 0. Planned story: from booking volume to route optimisation insights.
